

CORRELATION OF PATHOLOGIC AND SURGICAL FINDINGS IN PATIENTS WITH TMJ DISORDERS :MAGNETIC RESONANCE IMAGING STUDY

, EGYPTIAN DENTAL JOURNAL ,44 :3361 – 3367 , 1998 .

مقارنة الموجودات الباثولوجية والجراحية للمرضى الذين يعانون من اضطرابات في المفصل الصدغي الفكي بواسطة الرنين المغناطيسي .

ABSTRACT :

Patients with chronic TMJ disorders associated with disc displacement without perforation were collected .Preoperative MRI findings , pathologic findings , and surgical findings were correlated to each other . MRI was found to be a reliable noninvasive procedure that clearly demonstrates TMJ structures .It is effective in revealing disc displacement
